Profile

Hello world! 👋 I'm Aaron. I'm a frontend developer with a creative mindset dedicated to producing high quality visually appealing and intuitive user interfaces that enhance user experiences. Driven by a strong work ethic I love working on cool projects and pushing myself to be the best I can be building from my experiences from freelancing, starting my own projects as well as working in London and San Francisco.

Experience

Frontend Software Engineer, Thriva

London, 🇬🇧 (Jul 2021 – Present)

Worked on the B2C side of the company primarily within a team that focused on first time users. This included the marketing site as well as areas within the logged in experience. As a frontend developer I was responsible for collaborating with designers to improve as well as build new UI components in addition to working closely with backend engineers to deliver the appropriate information to our end users. The tech stack for the frontend apps was Vue/Nuxt.

Frontend Developer, Arcspire

London, 🇬🇧 (Mar 2020 – Jul 2021)

Working as the only frontend developer, I've been responsible for building the company dashboards (Javascript/React/Gatsby) both customer facing and internal whether that is from scratch or refactoring existing code. During my time I have also rebranded the company, designing the logo and website.

Frontend Software Engineer, Finvoice

San Francisco, CA 🇺🇸 (Jul 2018 – Oct 2019)

Worked on the frontend side of the web platform servicing customer requests and advancing the platform in a very quick based environment. Was the only frontend developer for the majority of my time there. Towards the end I was managing other frontend developers and led the migration of the platform from AngularJS to React.

Frontend Developer & Designer, Fanbytes

London, UK 🇬🇧 (Aug 2017 – Sep 2017)

Worked closely with the CTO on the Fanbytes platform, which is used by some of the biggest brands to power their snapchat influencer campaigns. Key responsibilities included designing and building the consumer facing side of the product along with helping to design and build pages for the public website.

Education

2014 – 2018
Computer Science, MEng (2.1)
The University of Warwick

2007 – 2014
11 GCSE's, 4 A-levels
The Campion School, Essex
